Journal of Materials Processing Technology 100 (2000) 285–288

Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 100

4Cr2NiMoV steels
The nucleation and propagation of a thermal fatigue crack in 4Cr2NiMoV steel, 63
7075 Al alloy
The strain rate and temperature dependence of the dynamic impact properties of 7075 aluminum alloy, 116

Ability function
Machine tool setting for the manufacturing of spherical cams, 147
Accelerated cooling
Simulation of the controlled rolling and accelerated cooling of a bainitic steel using torsion testing, 156
Adaptive control
Curvature prediction in air bending of metal sheet, 257
Adiabatic shearing mechanism
The strain rate and temperature dependence of the dynamic impact properties of 7075 aluminum alloy, 116
Air bending
Curvature prediction in air bending of metal sheet, 257
Al matrix
Fracture toughness of in situ TiCp–AlNp/Al composite, 36
Aluminium alloy
Wear resistance of laser-clad Ni–Cr–B–Si alloy on aluminium alloy, 142
Aluminium matrix composite
Tool wear and its mechanism for cutting SiC particle-reinforced aluminium matrix composites, 194
Aluminium matrix composite sheets
Laser bending of an Al6013/SiC_p aluminium matrix composite sheet, 214
Aluminum
The influence of parameter settings on cathodic self-etching during aluminum welding, 179
Aluminum foil scrap
Manufacturing of aluminum flake powder from foil scrap by dry ball milling process, 105
Aluminum sheet
Numerical prediction of the limiting draw ratio for aluminum alloy sheet, 131
Analysis of variance (ANOVA)
An experimental study of the tribological behaviour of the brass/steel pair, 273
Anisotropic yield criterion
Numerical prediction of the limiting draw ratio for aluminum alloy sheet, 131
AR modeling
Real time monitoring of tool breakage in a milling operation using a digital signal processor, 266
Arc welding
Mathematical modeling of melting rate in twin-wire welding, 250
Automotive sheet
Numerical prediction of the limiting draw ratio for aluminum alloy sheet, 131

$Ba_4CuPt_2O_9$ compounds
Synthesis temperature of $Ba_4CuPt_2O_9$ compounds and the influence of their addition on the orientation of the *c*-axes of fluorine-doped YBCO superconductors, 188
Bainitic steel
Simulation of the controlled rolling and accelerated cooling of a bainitic steel using torsion testing, 156
Ball milling
Manufacturing of aluminum flake powder from foil scrap by dry ball milling process, 105
Bending models
Curvature prediction in air bending of metal sheet, 257
Bending moment
Bending with upsetting of copper tube elbows, 236
Bending stress
Relationship between the fatigue limit and the mechanical strength of metals, 42
Built up edge
A study of high efficiency face milling tools, 12

Cathodic etching
The influence of parameter settings on cathodic self-etching during aluminum welding, 179
CBN tools
The performance of CBN tools in the machining of titanium alloys, 80
Ceramics
Study on the grinding of advanced ceramics with slotted diamond wheels, 230
Chamfered main cutting edge
A study of high efficiency face milling tools, 12
Chip strain
The performance of CBN tools in the machining of titanium alloys, 80
Coating extrusion
The extrusion of alumina composite billets, 47
Cold and warm forging process
Analysis of the ironing of a BJ-type constant velocity joint outer race with the upper bound element method, 209
Compocasting process
The effect of die shape on the hot extrudability and mechanical properties of 6061 Al/Al_2O_3 composites, 53
Computational model
Studies on a computational model and the stress field characteristics of weld-bonded joints for a car body steel sheet, 171
Conjugate theory
Machine tool setting for the manufacturing of spherical cams, 147
Constant velocity joint outer race
Analysis of the ironing of a BJ-type constant velocity joint outer race with the upper bound element method, 209
Constant-strain-rate die
The effect of die shape on the hot extrudability and mechanical properties of 6061 Al/Al_2O_3 composites, 53

Elsevier Science S.A.
PII: S0924-0136(00)00490-8

Contact judgement method
A new contact judgement method for sheet metal forming simulation, 219
Contour-parallel strategy
Incremental algorithms for finding the offset distance and minimum passage width in a pocket machining toolpath using the Voronoi technique, 30
Crack nucleation
The nucleation and propagation of a thermal fatigue crack in 4Cr2NiMoV steel, 63
Crack propagation
The nucleation and propagation of a thermal fatigue crack in 4Cr2NiMoV steel, 63
Cross-section deformation
Bending with upsetting of copper tube elbows, 236
Cup drawing
Numerical prediction of the limiting draw ratio for aluminum alloy sheet, 131
Curvatures
Curvature prediction in air bending of metal sheet, 257
Cutting conditions
Organization of tool supply and determination of cutting conditions, 241
Cutting temperature
The performance of CBN tools in the machining of titanium alloys, 80
Cutting tools
Advanced cutting conditions for the milling of aeronautical alloys, 1

D–H transformation
Machine tool setting for the manufacturing of spherical cams, 147
Darcy's law
Finite element analysis for the semi-solid state forming of aluminium alloy considering induction heating, 95
Data base
Organization of tool supply and determination of cutting conditions, 241
Die design
The effect of die shape on the hot extrudability and mechanical properties of 6061 Al/Al_2O_3 composites, 53
Die steel
A study on the mirror-like grinding of die steel with optimum in-process electrolytic dressing, 200
Die-casting
Simulation of metal filling progress during the casting process, 224
Diffusion wear
The performance of CBN tools in the machining of titanium alloys, 80
Draft angle
Simulation of metal filling progress during the casting process, 224
Drying time
The influence of microwave heating on the mechanical properties of wood, 67
DSP (digital signal processor)
Real time monitoring of tool breakage in a milling operation using a digital signal processor, 266
Dynamic test
A study on the development of a substitution process by powder metallurgy in automobile parts, 110

Electro-galvanised steel
Effects of operating parameters on surface quality for the pulsed laser welding of zinc-coated steel, 163
Envelope
Machine tool setting for the manufacturing of spherical cams, 147
Experimental design
The influence of parameter settings on cathodic self-etching during aluminum welding, 179
Extrusion
The extrusion of alumina composite billets, 47

Face milling
A study of high efficiency face milling tools, 12
Fatigue limit
Relationship between the fatigue limit and the mechanical strength of metals, 42
Finite element analysis
Finite element analysis for the semi-solid state forming of aluminium alloy considering induction heating, 95
Flake powder
Manufacturing of aluminum flake powder from foil scrap by dry ball milling process, 105
Flexural strength
The extrusion of alumina composite billets, 47
Forging
A study on the barrelling of sintered iron preforms during hot upset forging, 87
Fracture mechanism
Plastic flow of tungsten-based composite under hot compression, 123
Friction
An experimental study of the tribological behaviour of the brass/steel pair, 273

Geometric degeneracies
Incremental algorithms for finding the offset distance and minimum passage width in a pocket machining toolpath using the Voronoi technique, 30
Grain refinement
The strain rate and temperature dependence of the dynamic impact properties of 7075 aluminum alloy, 116
Green billet
The extrusion of alumina composite billets, 47
Grinding
Study on the grinding of advanced ceramics with slotted diamond wheels, 230

High toughness
A study on the development of a substitution process by powder metallurgy in automobile parts, 110
Hot compression
Plastic flow of tungsten-based composite under hot compression, 123
Hot extrusion
The effect of die shape on the hot extrudability and mechanical properties of 6061 Al/Al_2O_3 composites, 53

Induction heating
Finite element analysis for the semi-solid state forming of aluminium alloy considering induction heating, 95
Insulating layer
A study on the mirror-like grinding of die steel with optimum in-process electrolytic dressing, 200
Ironing process
Analysis of the ironing of a BJ-type constant velocity joint outer race with the upper bound element method, 209

Laminated billet
The extrusion of alumina composite billets, 47
Lap-joint configuration
Effects of operating parameters on surface quality for the pulsed laser welding of zinc-coated steel, 163

Laser bending
Laser bending of an Al6013/SiC_p aluminium matrix composite sheet, 214
Laser metrology
Effects of operating parameters on surface quality for the pulsed laser welding of zinc-coated steel, 163
Laser-cladding
Wear resistance of laser-clad Ni–Cr–B–Si alloy on aluminium alloy, 142

Mathematical model
Mathematical modeling of melting rate in twin-wire welding, 250
Mechanical properties
Simulation of the controlled rolling and accelerated cooling of a bainitic steel using torsion testing, 156
Melting rate
Mathematical modeling of melting rate in twin-wire welding, 250
Metal filling
Simulation of metal filling progress during the casting process, 224
Metal forming
Curvature prediction in air bending of metal sheet, 257
Metal matrix composites
The effect of die shape on the hot extrudability and mechanical properties of 6061 Al/Al_2O_3 composites, 53
Microstructure
The effect of die shape on the hot extrudability and mechanical properties of 6061 Al/Al_2O_3 composites, 53
A study on the development of a substitution process by powder metallurgy in automobile parts, 110
Microwave heating
The influence of microwave heating on the mechanical properties of wood, 67
Milling
Advanced cutting conditions for the milling of aeronautical alloys, 1
Milling operation
Real time monitoring of tool breakage in a milling operation using a digital signal processor, 266

Network element
Simulation of metal filling progress during the casting process, 224
Nickel
Advanced cutting conditions for the milling of aeronautical alloys, 1

Oblique cutting
A study of high efficiency face milling tools, 12
Optimization
Organization of tool supply and determination of cutting conditions, 241
Optimum in-process electrolytic dressing
A study on the mirror-like grinding of die steel with optimum in-process electrolytic dressing, 200
Organization
Organization of tool supply and determination of cutting conditions, 241
Orientation
Synthesis temperature of $Ba_4CuPt_2O_9$ compounds and the influence of their addition on the orientation of the *c*-axes of fluorine-doped YBCO superconductors, 188
Orthogonal arrays
An experimental study of the tribological behaviour of the brass/steel pair, 273

Poisson's ratio
A study on the barrelling of sintered iron preforms during hot upset forging, 87
Powder metallurgy
A study on the development of a substitution process by powder metallurgy in automobile parts, 110
Pulsed Nd:YAG laser welding
Effects of operating parameters on surface quality for the pulsed laser welding of zinc-coated steel, 163

Real time
Real time monitoring of tool breakage in a milling operation using a digital signal processor, 266
Relative density
The extrusion of alumina composite billets, 47

S-V-L reaction
Fracture toughness of in situ TiCp–AlNp/Al composite, 36
SCORF mechanism
Machine tool setting for the manufacturing of spherical cams, 147
Semi-solid state
Finite element analysis for the semi-solid state forming of aluminium alloy considering induction heating, 95
Sheet metal forming
A new contact judgement method for sheet metal forming simulation, 219
SiC particles
Tool wear and its mechanism for cutting SiC particle-reinforced aluminium matrix composites, 194
Silver white chip
A study of high efficiency face milling tools, 12
Sintered iron
A study on the barrelling of sintered iron preforms during hot upset forging, 87
Sintering
A study on the development of a substitution process by powder metallurgy in automobile parts, 110
Slotted diamond wheels
Study on the grinding of advanced ceramics with slotted diamond wheels, 230
Specific cutting pressure
The performance of CBN tools in the machining of titanium alloys, 80
Split Hopkinson bar
The strain rate and temperature dependence of the dynamic impact properties of 7075 aluminum alloy, 116
Stamping
Numerical prediction of the limiting draw ratio for aluminum alloy sheet, 131
Static–implicit
A new contact judgement method for sheet metal forming simulation, 219
Strain hardening index
A mathematical theory of plasticity for compressible powder metallurgy materials — Part III, 262
Strain rate and temperature effects
Plastic flow of tungsten-based composite under hot compression, 123
Strain rate and temperature effects
The strain rate and temperature dependence of the dynamic impact properties of 7075 aluminum alloy, 116
Strain rate sensitivity
A mathematical theory of plasticity for compressible powder metallurgy materials — Part III, 262
Stress field
Studies on a computational model and the stress field characteristics of weld-bonded joints for a car body steel sheet, 171
Submerged arc welding
Mathematical modeling of melting rate in twin-wire welding, 250

Super-abrasive wheel
A study on the mirror-like grinding of die steel with optimum in-process electrolytic dressing, 200

Taguchi techniques
An experimental study of the tribological behaviour of the brass/steel pair, 273
Tensile stress
Relationship between the fatigue limit and the mechanical strength of metals, 42
Thermal fatigue
The nucleation and propagation of a thermal fatigue crack in 4Cr2NiMoV steel, 63
Titanium
Advanced cutting conditions for the milling of aeronautical alloys, 1
Titanium alloy
The performance of CBN tools in the machining of titanium alloys, 80
Tool
Organization of tool supply and determination of cutting conditions, 241
Tool breakage
Real time monitoring of tool breakage in a milling operation using a digital signal processor, 266
Tool life
Tool wear and its mechanism for cutting SiC particle-reinforced aluminium matrix composites, 194
Tool management
Organization of tool supply and determination of cutting conditions, 241
Torsion testing
Simulation of the controlled rolling and accelerated cooling of a bainitic steel using torsion testing, 156
Tribology
An experimental study of the tribological behaviour of the brass/steel pair, 273
Tube wall weakening
Bending with upsetting of copper tube elbows, 236
Tungsten composite
Plastic flow of tungsten-based composite under hot compression, 123
Twin wire
Mathematical modeling of melting rate in twin-wire welding, 250

Upsetting force
Bending with upsetting of copper tube elbows, 236
Upsetting-compression test
A mathematical theory of plasticity for compressible powder metallurgy materials — Part III, 262

Viscoplastic model
Finite element analysis for the semi-solid state forming of aluminium alloy considering induction heating, 95
Volume fraction
Fracture toughness of in situ TiCp–AlNp/Al composite, 36
Voronoi diagram
Incremental algorithms for finding the offset distance and minimum passage width in a pocket machining toolpath using the Voronoi technique, 30

Wear
Wear resistance of laser-clad Ni–Cr–B–Si alloy on aluminium alloy, 142
An experimental study of the tribological behaviour of the brass/steel pair, 273
Wear mechanism
Tool wear and its mechanism for cutting SiC particle-reinforced aluminium matrix composites, 194
Weld pitch
Studies on a computational model and the stress field characteristics of weld-bonded joints for a car body steel sheet, 171
Weld-bonded joint
Studies on a computational model and the stress field characteristics of weld-bonded joints for a car body steel sheet, 171
Welding
The influence of parameter settings on cathodic self-etching during aluminum welding, 179
Wood
The influence of microwave heating on the mechanical properties of wood, 67

YBCO superconductors
Synthesis temperature of $Ba_4CuPt_2O_9$ compounds and the influence of their addition on the orientation of the *c*-axes of fluorine-doped YBCO superconductors, 188
